a
Seven-layer tool-first architecture
L6
Entry — form-driven CLI / FastAPI
L5
Session memory & workspace
L4
Multi-agent execution + CapGate runtime
L3
Service orchestration — health check, auto-start
L2
11 domain workflows — generate → evaluate → score → rank
L1
Capability wrappers — validate outputs, write audit records
L0
54 tools behind 22 local microservices (ports 8003–8024)
20 vendored external research codes (17 git submodules) · GPU models, CPU optimizers, aligners
